Vanguard Market & Economic Overview

Heightened volatility led to losses across the global equity markets

Driven by steep losses in the fourth quarter of -14.3%, the U.S. equity market[1] ended the year with a return of -5.2%. The uncertainty created by continuing trade disputes, concerns over the velocity of the Federal Reserve's interest rate hikes, and the partial government shutdown, all contributed to volatility and market declines. As of year-end, large cap stocks[2] had turned in the best performance, despite losing -4.4%, including a -13.5% loss for the quarter, due to better relative results from the Information Technology and Healthcare sectors. Meanwhile, mid-cap[3] and small-cap[4] equity segments also fell sharply, returning -9.2% and -9.3% in 2018, respectively; they posted -15.5% and -18.3% returns during the fourth quarter. Although growth stocks[5] (-16.3%) trailed relative to value stocks[6] (-12.2%) for the quarter, they outpaced their value counterparts for the year, returning -2.1% versus -8.6%. Facing concerns over muted growth expectations, international equities[7] also suffered losses during the quarter, falling -11.8% during the period, and -14.6% for the prior twelve months. Higher Treasury yields and the strong U.S. dollar continued to negatively impact emerging markets[8], which were down -6.1% for the fourth quarter and -13.3% for the year. Similarly, the developed markets index[9] fell -13.2% for the quarter, as Brexit fears, the Italian budget crisis and riots in France contributed to volatility. Even the German economy saw its first contraction since early 2015, partially due to very low demand in the auto industry.

Fixed income asset classes posted mixed results, with the broad U.S. market mainly flat for 2018

The broad U.S. fixed income market[10], although up 1.6% during the fourth quarter, remained relatively flat for the year with a return of -0.1%. The Federal Reserve raised short-term rates by 25 basis points in December, marking the fourth time in twelve months, to a target range of 2.25% to 2.50%. The yield curve continued to flatten, and the spread between 2-year and 10 year Treasury securities finished 2018 at 0.21%, down from 0.51% at the end of 2017. Market participants closely watch the relationship between short-term and long-term yields as an inverted yield curve is widely considered an indicator of a possible recession. The ten-year Treasury note fell from 3.09% to 2.69% in the fourth quarter as these securities rallied, with investors moving toward their relative safety in light of continued equity market volatility and geopolitical uncertainty. Widening credit spreads served as a headwind to corporate bond returns, as concerns of slowing global growth, the impact of rising interest rates on corporate profits in the form of higher borrowing costs, as well as the general risk-off sentiment led investors to demand higher yield for more risk. Overall, higher quality bonds held up better than high-yield bonds for the quarter, given investors' preference for safety during recent months. Investment-grade corporate bonds[11] finished flat for the quarter (0.01%) but down -2.1% for the year; high-yield bonds[12] posted a loss of -4.5% for the quarter and matched the -2.1% performance of the higher quality corporate segment for the year. International bonds fared positively in the fourth quarter, with the currency-hedged index performing better than the unhedged version, as the U.S. dollar appreciated relative to other major currencies. The hedged index[13] returned 1.9% for the quarter and 3.2% for the year, while unhedged international bonds[14], which are subject to currency fluctuations, returned 0.9% for the quarter and fell -2.1% for the year.

Global economies deal with an expected slowdown in growth

Despite concerns of a potential slowdown and heightened market volatility, U.S. economic conditions remained relatively strong through the third quarter, as real GDP (Gross Domestic Product) increased at an annualized rate of 3.4%. The headline unemployment rate remained low and ended the quarter at 3.9% even as new entrants entered the labor force and pushed up participation levels.

Vanguard Market & Economic Overview

Nonfarm payrolls added a better-than-expected 312,000 jobs in December, an increase over the 176,000 in November and beating estimates of 177,000. Average hourly earnings rose 3.2% over the past year while annualized inflation landed at 2.2% in December, down from 2.5% during the previous month. The Federal Reserve continues to anticipate core inflation levels in the 2% range over the longer term. Vanguard does not see a material risk of a sharp uptick in core inflation despite lower unemployment rates and higher wages. Vanguard continues to believe the secular forces of globalization and ever more powerful technologies will make it difficult to achieve sustained 2% inflation in the U.S.

In the Eurozone, while Vanguard believes the risk of a break-up to be relatively low, elevated political risks and global deceleration remain concerning, despite some positive economic drivers such as labor market data and monetary policy. Economic growth slowed further to a 1.6% annual rate in the third quarter, down from 2.1% during the second quarter of the year. Consistent with the last few months, the unemployment rate has held steady at the 8.1% level as of October. This represents the lowest jobless rate since November of 2008. As a diverse economy, jobless rates vary widely across those nations utilizing the common currency. Germany is on the lower end with a rate of 3.3% while Greece recently reported 18.9% for August and Spain's jobless level was 14.8% at the end of September.

China's GDP grew at a 6.5% annual rate for the third quarter, measured on a year-over-year basis. This is the lowest level since the first quarter of 2009, during the global financial crisis, and displays how tariffs and trade disputes may be starting to impact growth. Chinese President Xi Jinping met with U.S. President Trump in early December, where the two declared a 90 day truce in the trade war. While a disruption in trade is expected to impact growth on both sides, the uncertainty has unsettled financial markets as well. By the end of the year, the Shanghai composite was down over 20%, while retail sales and real estate were slowing. Consumer price inflation in China was 2.2% in November, as the annual rate slowed to a four-month low. This measure has averaged 5.2% from 1986 through 2018. The unemployment rate remained steady at 3.8% as of the end of the third quarter, despite concerns over financial instability and rising external and domestic challenges.

The United Kingdom experienced a 4.1% unemployment rate, close to the lowest levels experienced during the 1970s, while continuing to face uncertainty over the ongoing Brexit negotiations. The United Kingdom is expected to exit the European Union on March 29th, and the type of deal that will be struck, if any, continues to be uncertain. Vanguard believes the Bank of England is likely to remain on hold until there is further clarity around Brexit. GDP grew 0.6% for the third quarter and 1.5% year-over-year (the highest of 2018), driven primarily by household consumption while capital expenditures and net trade were detractors. Annual inflation came in at 2.3% at the end of November, slightly lower than earlier 2018 readings, due to the slowdown in the costs of transport, food and recreation. Although lower, this inflation reading remains similar to the 30-year average of 2.58%.

Although Japan was able to weather a difficult environment, including natural disasters and weak external demand in 2018, it still experienced a sharp contraction in third quarter GDP (-0.6%). This reading was down from the positive result of 0.7% during the second quarter. Personal consumption and capital expenditures came under pressure during the year while domestic demand helped to support the economy. Japan's inflation was marked at 0.8% year over year in November, due to downward pressure from falling housing costs. The Bank of Japan is not expected to increase rates in 2019 and its forward guidance will likely emphasize the persistence of low rates. Unemployment remained at low levels, coming in at 2.5% as of November.

Vanguard Market & Economic Overview

Central banks reduce accommodative policies

The Federal Reserve continued to reduce its accommodative stance, based on the aforementioned increase in the Fed Funds rate as well as the continued reduction in the size of their balance sheet. Confidence in the labor market, stable consumer prices and the expansionary effects of the Tax Cuts and Jobs Act have continued to support the outlook on the economy despite turbulent markets. The tax cuts in particular have helped to accelerate consumer spending, the largest segment of the U.S. economy. While some investors are apprehensive as to the pace of the Fed's tightening, Fed Chairman Jerome Powell recently remarked "with the muted inflation readings that we've seen coming in, we will be patient as we watch to see how the economy evolves" and "We will be prepared to adjust policy quickly and flexibly and use all of our tools to support the economy should that be appropriate". The markets continue to price in a higher Fed Funds rate in 2019. Vanguard shares this sentiment and also expects the Fed to increase rates in the coming year before halting further increases in the face of nonaccelerating inflation and decelerating top line growth.

European Central Bank (ECB) President Mario Draghi stressed concerns of "the threat of protectionism, vulnerabilities in emerging markets and financial market volatility." However, the ECB has reiterated that December marks the end of its quantitative easing program, which began in 2015 to reduce the risk of deflation. As of last quarter, Draghi signaled a tightening of the European Central Bank's deposit rate would begin after summer of 2019, but the consensus among economists is that it will take a bit longer to start that process. The deterioration in economic momentum in Europe's economy was driven by a slowdown in global trade, including weak demand for European exports, and industrial cycle. A key factor was the slow adjustment made by German auto makers to adapt to new European Union emissions standards.

Final thoughts

Vanguard's current outlook reflects lower return expectations across equities and fixed income relative to history while continuing to stress the importance of a long-term perspective. With increased volatility and lower returns on the horizon, Vanguard believes it's important to maintain perspective as a low-cost diversified portfolio along with periodic rebalancing, greatly increases the chances for investment success. Vanguard Chief Investment Officer, Greg Davis, reminds us in his recent blog, "What all investors should keep in mind is the risk of timing an investment decision poorly is generally higher than the risk of changing nothing at all in your portfolio. Remember, it's also a decision to do nothing."

For more information about Vanguard funds or non-Vanguard funds offered through Vanguard Brokerage Services, visit vanguard.com or call your Investment Consultant or Relationship Manager to obtain a prospectus or, if available, a summary prospectus. Investment objectives, risks, charges, expenses, and other important information are contained in the prospectus; read and consider it carefully before investing. Total Portfolio Net of Fees returns reflect the deduction of fund expense ratios, purchase or redemption fees, and any advisory service fee applied to the client portfolio.

Total Portfolio returns represent client-specific time-weighted returns (TWR) are presented gross of any applicable service fees with the exception of mutual fund expense ratios and other security-level expenses.

Client performance inception date is generally the first month-end after initial funding. Mutual funds and all investments are subject to risk, including the possible loss of the money you invest. Diversification does not ensure a profit or protect against a loss.

Performance figures assume the reinvestment of dividends and capital gains distributions. The fund performance percentages are based on fund total return data, adjusted for expenses, obtained from Lipper, a Thomson Reuters Company. The total return data was not adjusted for fees and loads.

Benchmark comparative indexes represent unmanaged or average returns on various financial assets, which can be compared with funds' total returns for the purpose of measuring relative performance.
